

I have the following remarks:

B. Color Controls and Peripherals

- All color controls ... shall be placed at their factory settings. Are these listed when the monitor is unpacked? Are these settings changed after the monitor is taken out of the box?
- any built-in speakers, TV tuners, etc. maybe powered down: how is this to be done? I suggest that this is only to be done when it can be done by the user, i.e. without any internal changes to the product.
